PENROSE

NEW

"Penrose", introduced by British mathematician Roger Penrose, is a non-repeating tiling pattern made of "kite" and "dart" shapes that maintain symmetry without repetition. Widely used in quilting, textiles, and art, it blends complexity with modern aesthetics, showcasing the harmony of mathematics, art, and nature.

DELIVERY: EARLY JUNE

NEW

EINSTEIN

The Einstein tile is a specific shape inspired by the renowned scientist Albert Einstein. Just as his theories introduced new perspectives, the Einstein tile offers an innovative approach to aperiodic tiling. Its edges and angles create a non-repeating pattern that covers a surface without gaps. Mathematically proven to tile the plane aperiodically, it ensures no repeating pattern, no matter how the tiles are arranged.
